

Fixed-delay geometry | matched examples

Lowest original trial ID in each direction; selected without fitting scores

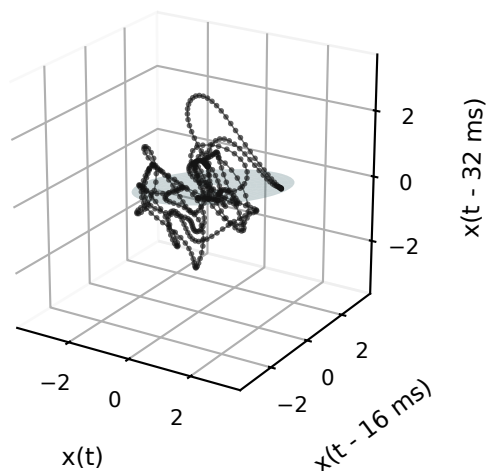

D1 / trial 16 | 1-torus: planar band
at/near bound

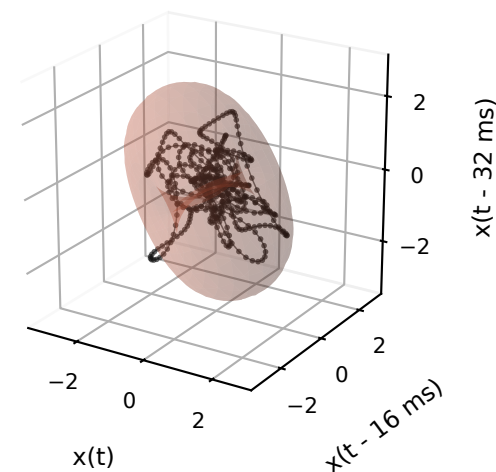

D2 / trial 10 | 1-torus: planar band
no fit flags

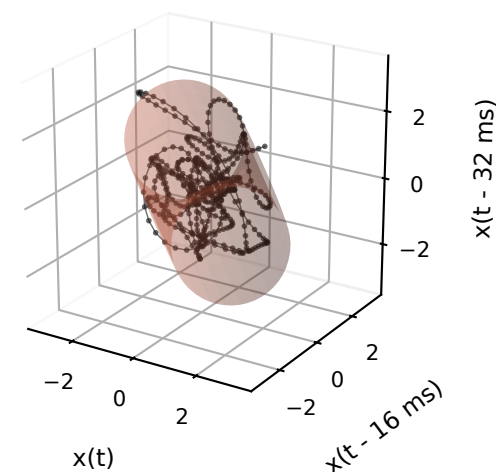

D3 / trial 14 | 1-torus: planar band
no fit flags

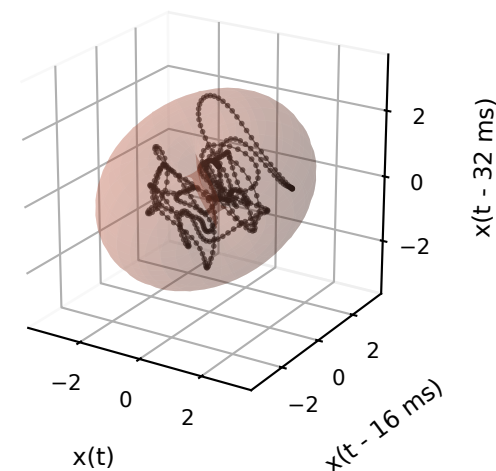

D1 / trial 16 | 2-torus: donut volume
collapsed hole; at/near bound

D2 / trial 10 | 2-torus: donut volume
collapsed hole; at/near bound

D3 / trial 14 | 2-torus: donut volume
collapsed hole; at/near bound

Original lag coordinates; no PCA reduction. Both fits use all 468 points.
Tube overlays are parametric sweeps, not volume boundaries; they can self-intersect. Not a topology test.
