monkeyT_session-y070316009-12_lfp-8

198 short-delay trials = 33 per direction | final 500 ms before GO
Five held-out folds: 40, 40, 40, 39, 39 test trials; 158-159 training trials.

Bars: macro-F1 from all held-out predictions. Gray dots/ranges: median and central 95% of 200 saved label-shuffle scores, not confidence intervals. Geometry is the earlier K-mode shape-matrix representation, not the 15-feature tube fit and not an OLS-derived decoder.
